Polyethylene LLDPE

Linear low density polyethylene, used as a universal additive. This additive improves the mechanical and dielectric properties of the product, provides high tensile strength.

To give transparency and flexibility, use a 10-20% LDPE additive.

Compatible with many resins.

There is no static electrification.

It does not crumble.

The glass fiber lubricant should ensure good wettability and impregnation with unsaturated polyester resins.

It is semitransparent.

Guaranteed shelf life - 12 months.

The properties of glass fibers are determined mainly by their chemical composition. Characterized by high heat resistance, low thermal conductivity, low coefficient of thermal expansion, high chemical resistance and mechanical strength.

Light snap.

There is no static electrification.

It does not crumble.

The glass fiber lubricant should ensure good wettability and impregnation with unsaturated polyester resins.

Uniform distribution.

Easily crumbles.

Guaranteed shelf life - 12 months.

### Fibrous tissue

The unit weight of the uniform surface is -800 g / m<sup>2</sup>.

The standard width is 120cm.

High mechanical strength.

The glass fiber lubricant should ensure good wettability and impregnation with unsaturated polyester resins.

Guaranteed shelf life - 12 months.

### Mat of chopped strands

The weight of a uniform surface unit is 450 g / m<sup>2</sup>.

The standard width is 120cm.

Good solubility with binder.

Semi-transparent, well impregnated with adhesive material.

Has high mechanical resistance.

The loss of ignition is 2.7-4.3%.

Tensile strength min 195N.

The length of fiberglass should be between 20-50mm.

To protect against moisture, good packaging is required.

The glass fiber lubricant should ensure good wettability and impregnation with unsaturated polyester resins.

Guaranteed shelf life - 12 months.

### Control additives and auxiliary materials

#### Styrene

Unsaturated hydrocarbon, which is a transparent colorless liquid with a characteristic odor under normal conditions. Tkip 145.2 ° C (760 mm Hg), the refractive index np20 = 1.5469.  
Styrene should not contain impurities, such as benzaldehyde, toluene, xylene.  
Density, g / cm<sup>3</sup> - 0.906.

Mass fraction of styrene, %, not less than - 99.8.

Mass fraction of phenylacetylene, % - 0.01.

Mass fraction of methyl ethylacrolein, % not more than - 0.006.

Mass fraction of divinylbenzene, % - 0.0005.

Mass fraction of acetophenol, % not more than - 0.006.

Mass fraction of carbonyl compounds, %, not more than - 0.01.

Mass fraction of polymerized styrene, % - 0.001.

Mass fraction of stabilizer, %, not less than - 0.0005.

Guaranteed shelf life - 12 months.

#### Polyester film

Products, on a teraphthalic base, thin, is an unsaturated polyester.

The thickness of the material is 21, 23, 36 microns.

The width should be no more than 60mm and not less than 50mm.

Stability in styrene: lavan film when in styrene for 30min. should not be subject to change.

Humidity is not more than 1%.

At 50 ° C at nominal width, the extensibility should be 1N / mm.

#### Promoter D

N,N-Ethylacetamide

The liquid is yellow. The content of the main substance is 97.0% min.

Physical properties:

Density, 20 ° C 994kg / m<sup>3</sup>.

The melting point is below 73 ° C.

The flash point is 94 ° C.

Autoignition temperature is 220 ° C.

Guaranteed shelf life - 12 months.

### Catalyst nl-49p

Cobalt (II) 2-ethylhexane, 1% Co in the solvent.  
Composition 90% of TCI, 4% of white spirit.  
Appearance - a transparent, bluish-violet liquid.  
The cobalt content is 1.00 ± 0.05%.  
Density, 20 ° C - 949 kg / m3.  
Viscosity, 20 ° C - 7MPa × cm.  
The flash point is 89 ° C.  
The autoignition temperature is not determined.  
Shelf life - 12 months.

### Catalyst nl-51p

Cobalt (II) 2-ethylhexane, 6% Co, in a solvent.  
The composition is 40% TXIB, 25% white spirit.  
Appearance - a transparent, bluish-violet liquid.  
The cobalt content is 6.00 ± 0.1%.  
Density, 20 ° C - 963kg / m3.  
Viscosity, 20 ° C - 16 mPas. S.  
The flash point is 72 ° C.  
The autoignition temperature is not determined.  
Guaranteed shelf life - 12 months.

### ButanoxM-50

Methyl ethyl ketone, peroxide in dimethyl phthalate.  
The peroxide content is 33%.  
Composition 63% DMF, 4% IEC + water.  
Appearance is a clear, colorless liquid.  
Total active oxygen is 8.8-9.9%.  
Density, 20 ° C - 1180kg / m3.  
The viscosity is 24 mPas.  
The flash point is above 60 ° C.  
The autoignition temperature is 260 ° C.  
Guaranteed shelf life - 12 months.
